COMMUNICATE IN CONFIDENCE

COMMUNICATE IN CONFIDENCE

Secure messaging and encrypted phone calls anytime, anywhere.

With the widespread and accelerating use of unsanctioned consumer messaging and Voice over IP (VoIP) apps within organizations, the risks to business communications have never been greater.

Confidential discussions by voice and text are increasingly vulnerable to eavesdropping and are being stored on networks and servers that are completely outside of organizations' visibility and control.

Seecrypt is available for Windows PCs and Apple Macs and Android, iPhone, Blackberry and Windows mobile devices.

Seecrypt is the global solution for trusted mobile communications, providing private, real-time messaging, voice/conference calling along with file sharing and transfer. Protected by leading-edge, authenticated, end-to-end encryption.

Combining military-grade security with the ease of use of a consumer app, Seecrypt requires no user training or configuration, ensuring fast and easy deployment, user acceptance and adoption across the enterprise.

With Seecrypt you can trust that your confidential mobile communications remain confidential.

STRONG ENCRYPTION FOR VOICE, MESSAGING AND FILE SHARING

Seecrypt is an industry leader in delivering multi-layer strong encryption for voice/conference calls, instant messaging and file sharing. The application uses standards-based protocols for optimized delivery of encrypted real-time content between mobile devices, even across low-bandwidth wireless networks.

TRUST IN YOUR BRAND

You can demonstrate that security is your absolute priority, with Seecrypt's completely white-labeled offering, matched to your brand identity. Be the company that ensures their employees can easily and securely communicate and collaborate with each other. Show your customers what they mean to you, strengthening your relationship with them with a value-add app that allows them to talk directly to you, without having to worry about security access codes or costs.

Communicate Securely Anytime, Anywhere

KEY FEATURES AND BENEFITS

Private Messaging

Protect your conversations between smartphones, Macs and PCs with secure messaging and total privacy. Share file attachments, voice clips, photos, with the ease of a consumer app.

Group Messaging, for collaboration can be defined centrally by the organization or locally by the user, providing total security and control.

Secure Phone Calls

End-to-end encryption ensures complete privacy and precludes third-party eavesdropping. Seecrypt's adaptive voice codecs ensure no degradation of voice quality, along with low data and battery use.

Caller ID spoofing and the risk of impersonation are nullified by identity authentication of all calling parties.

Works Across Any Network

Seecrypt users can make calls over any network, including but not limited to 2G/EDGE, CDMA, 3G/HSDPA, 4G/LTE, Wi-Fi and Satellite networks.

Real-time, encrypted voice and data content delivery between mobile devices is optimized, even across low-bandwidth mobile/wireless networks.

Secure, Instant Conference Calls

NEW

Seecrypt enables users to initiate instant, ad-hoc conference calls between groups of contacts on mobile and land-lines.

For scheduled conference calls, the web interface enables you to schedule the call, identify who is on the call and have control during the call to mute or remove participants.

Strong Encryption

With Seecrypt, users are protected against call interception and eavesdropping by the highest level of encryption and authentication. End-to-end encryption also ensures privacy across messaging and file transfers.

Every call and every message is encrypted with a new key and wrapped in a double-layer cryptographic scheme for complete end-to-end security.

Eliminates Roaming Costs

Because all voice calls are routed through the mobile device's data connection, Seecrypt dramatically reduces the cost of calling between mobile devices.

Seecrypt's secure Voice over IP (VoIP) network eliminates long-distance and international call costs between mobile devices. Seecrypt Voice Gateway enables similar cost savings for calls between landlines/office phone systems and mobiles.

Voice (PBX) Gateway

The Seecrypt Voice Gateway provides a secure, encrypted connection from a mobile device to your office phone system, from there users can call land lines and access PBX features like voicemail, call forwarding and conference calling.

The Voice Gateway also enables secure calls to Seecrypt mobile users directly from your office phone or call center.
